3-C+E by District and Day for 2011-2026 (https://mcusercontent.com/758ca84e9c44c25b4123ada30/files/31964c67-7235-047a-23aa-5744a9aaeb4d/HistoricalCEandPMTF.17.pdf?mc_cid=0384c14408&mc_eid=UNIQID)

Good evening,

The highest Daily Catch Index of the season was recorded today indicating the migration rate at the test fishing transect remains strong. As such, an extremely early run is becoming less likely.

PMTF Stock Composition Status: The stock composition for June 26-27 should be released tomorrow

.

PMTF Daily Index and inshore catch + escapement (C+E) for 2011-2026. Gray area curve = observed C+E for historical years scaled to the left vertical axis; red columns = observed C+E for 2026. Black lines = respective Daily PMTF Catch Indices for each historical year; the red line = a 3-day moving average of the Daily Catch Index for 2026 based on Stations 2-24 (units for the daily indices are not shown, but all graphs are scaled the same). The green line shown for the 2025 panel reflects the 2026 Daily Catch Index without a moving average. Catch Indices for years prior to 2018 represent the average catch-per-unit-effort (CPUE) across Stations 2-10. Furthermore, a shallower net (6 m deep) was used during 2011-2019; beginning in 2020 the net depth has been 11 m deep. Run timing for C+E was estimated by comparing each year's date when 50% of the run reached inshore to July 4. Blue vertical lines highlight July 4 for reference.

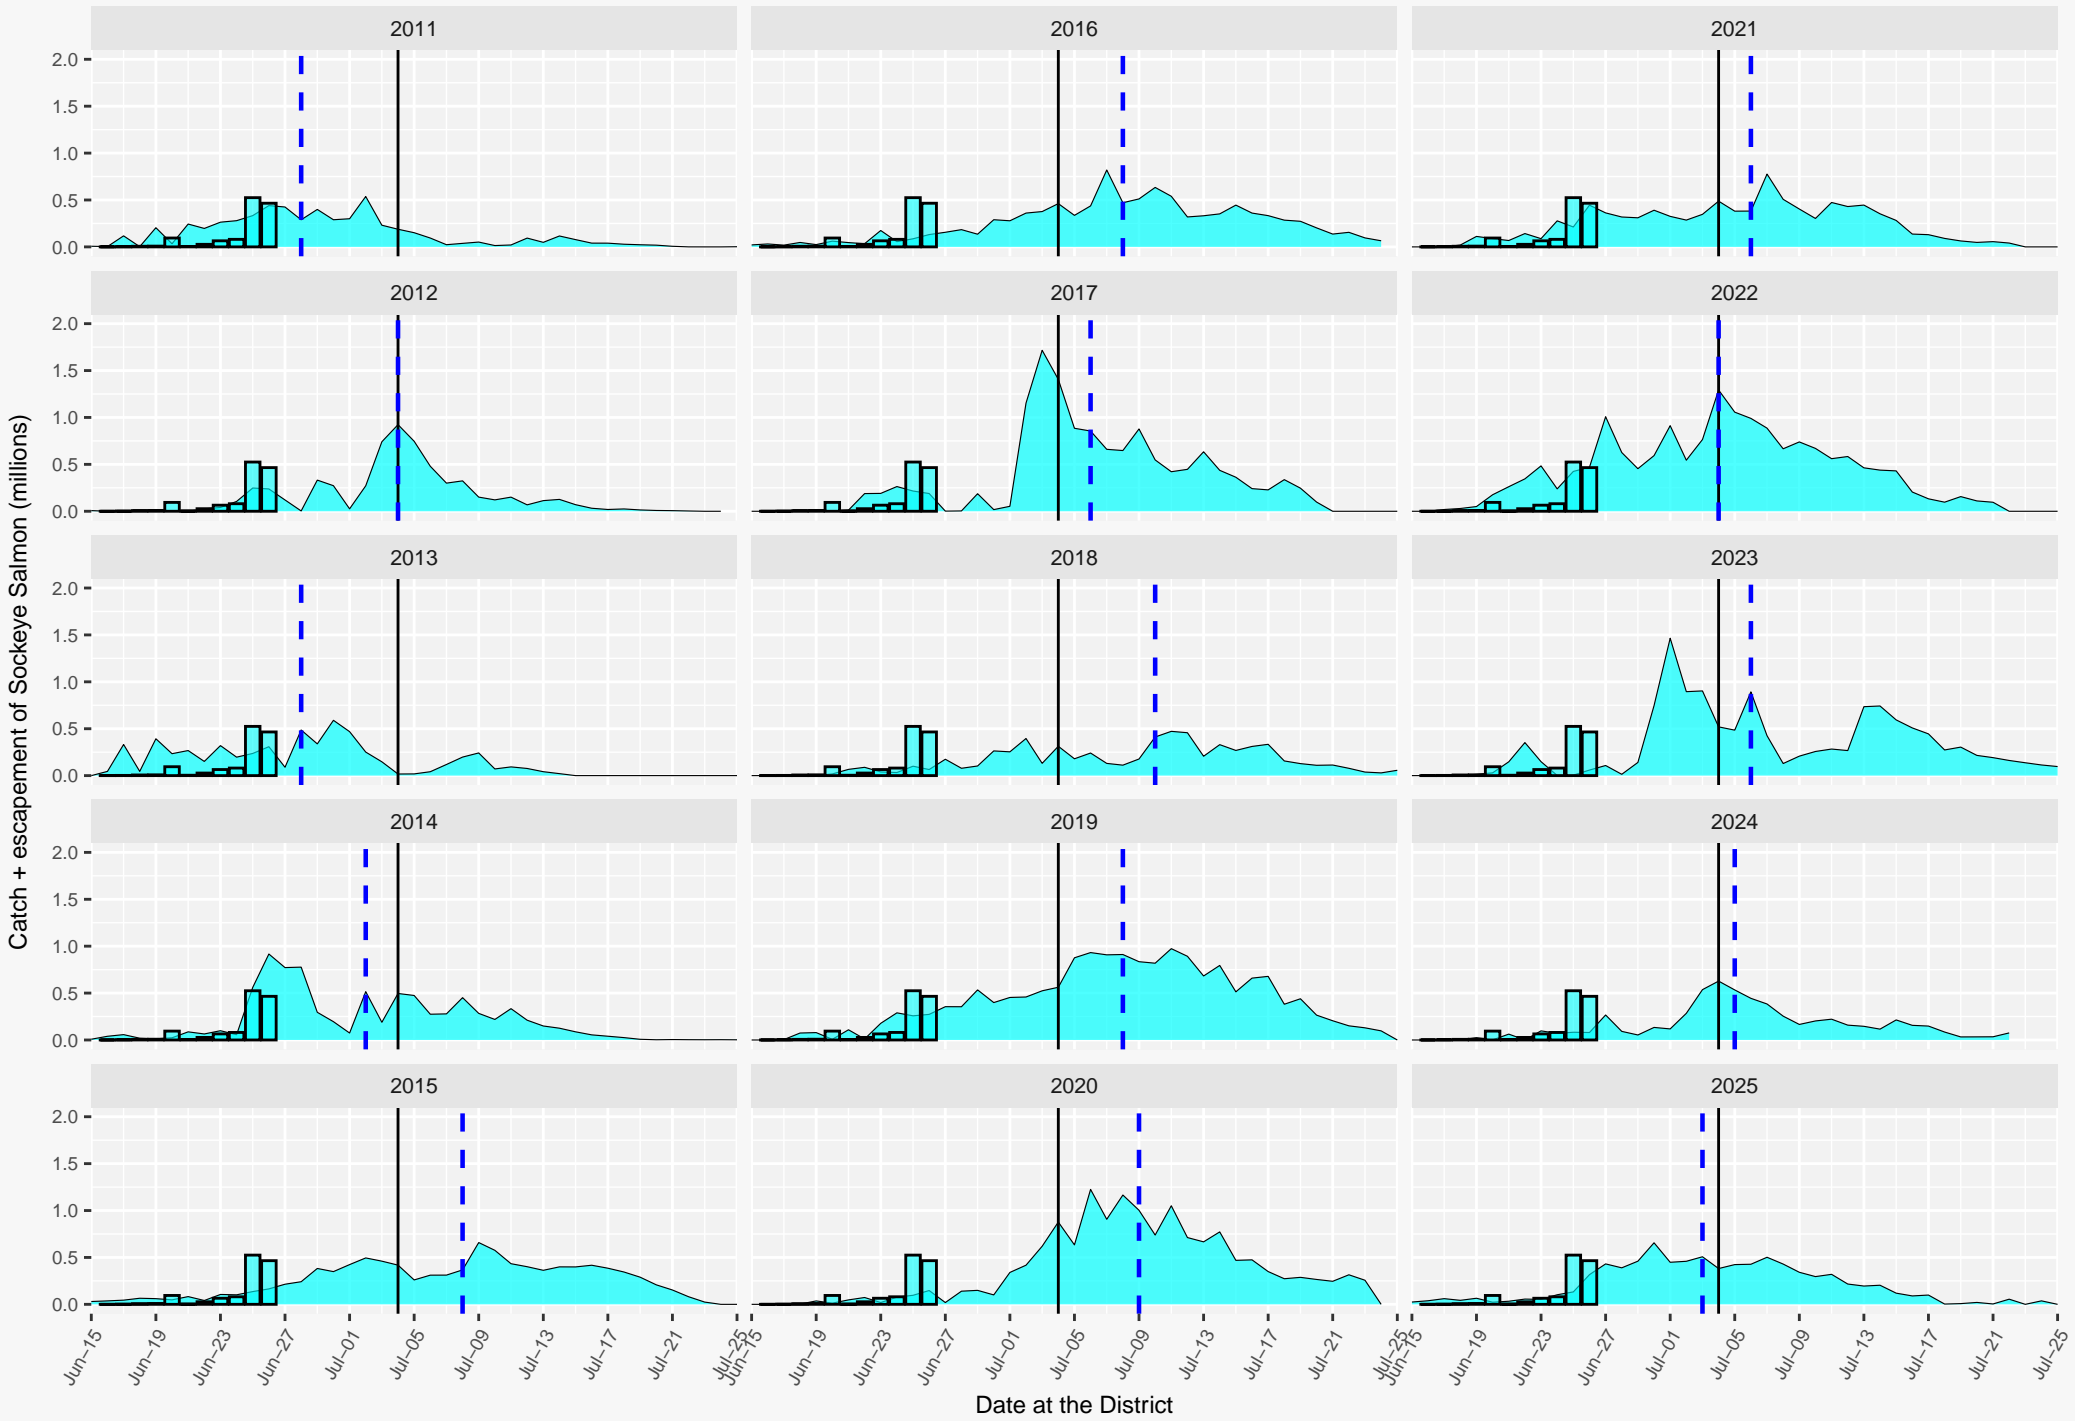

Seasonal sockeye C+E by district, 2011–2026. Black line = July 4; blue dashed line = date of 50% cumulative C+E.

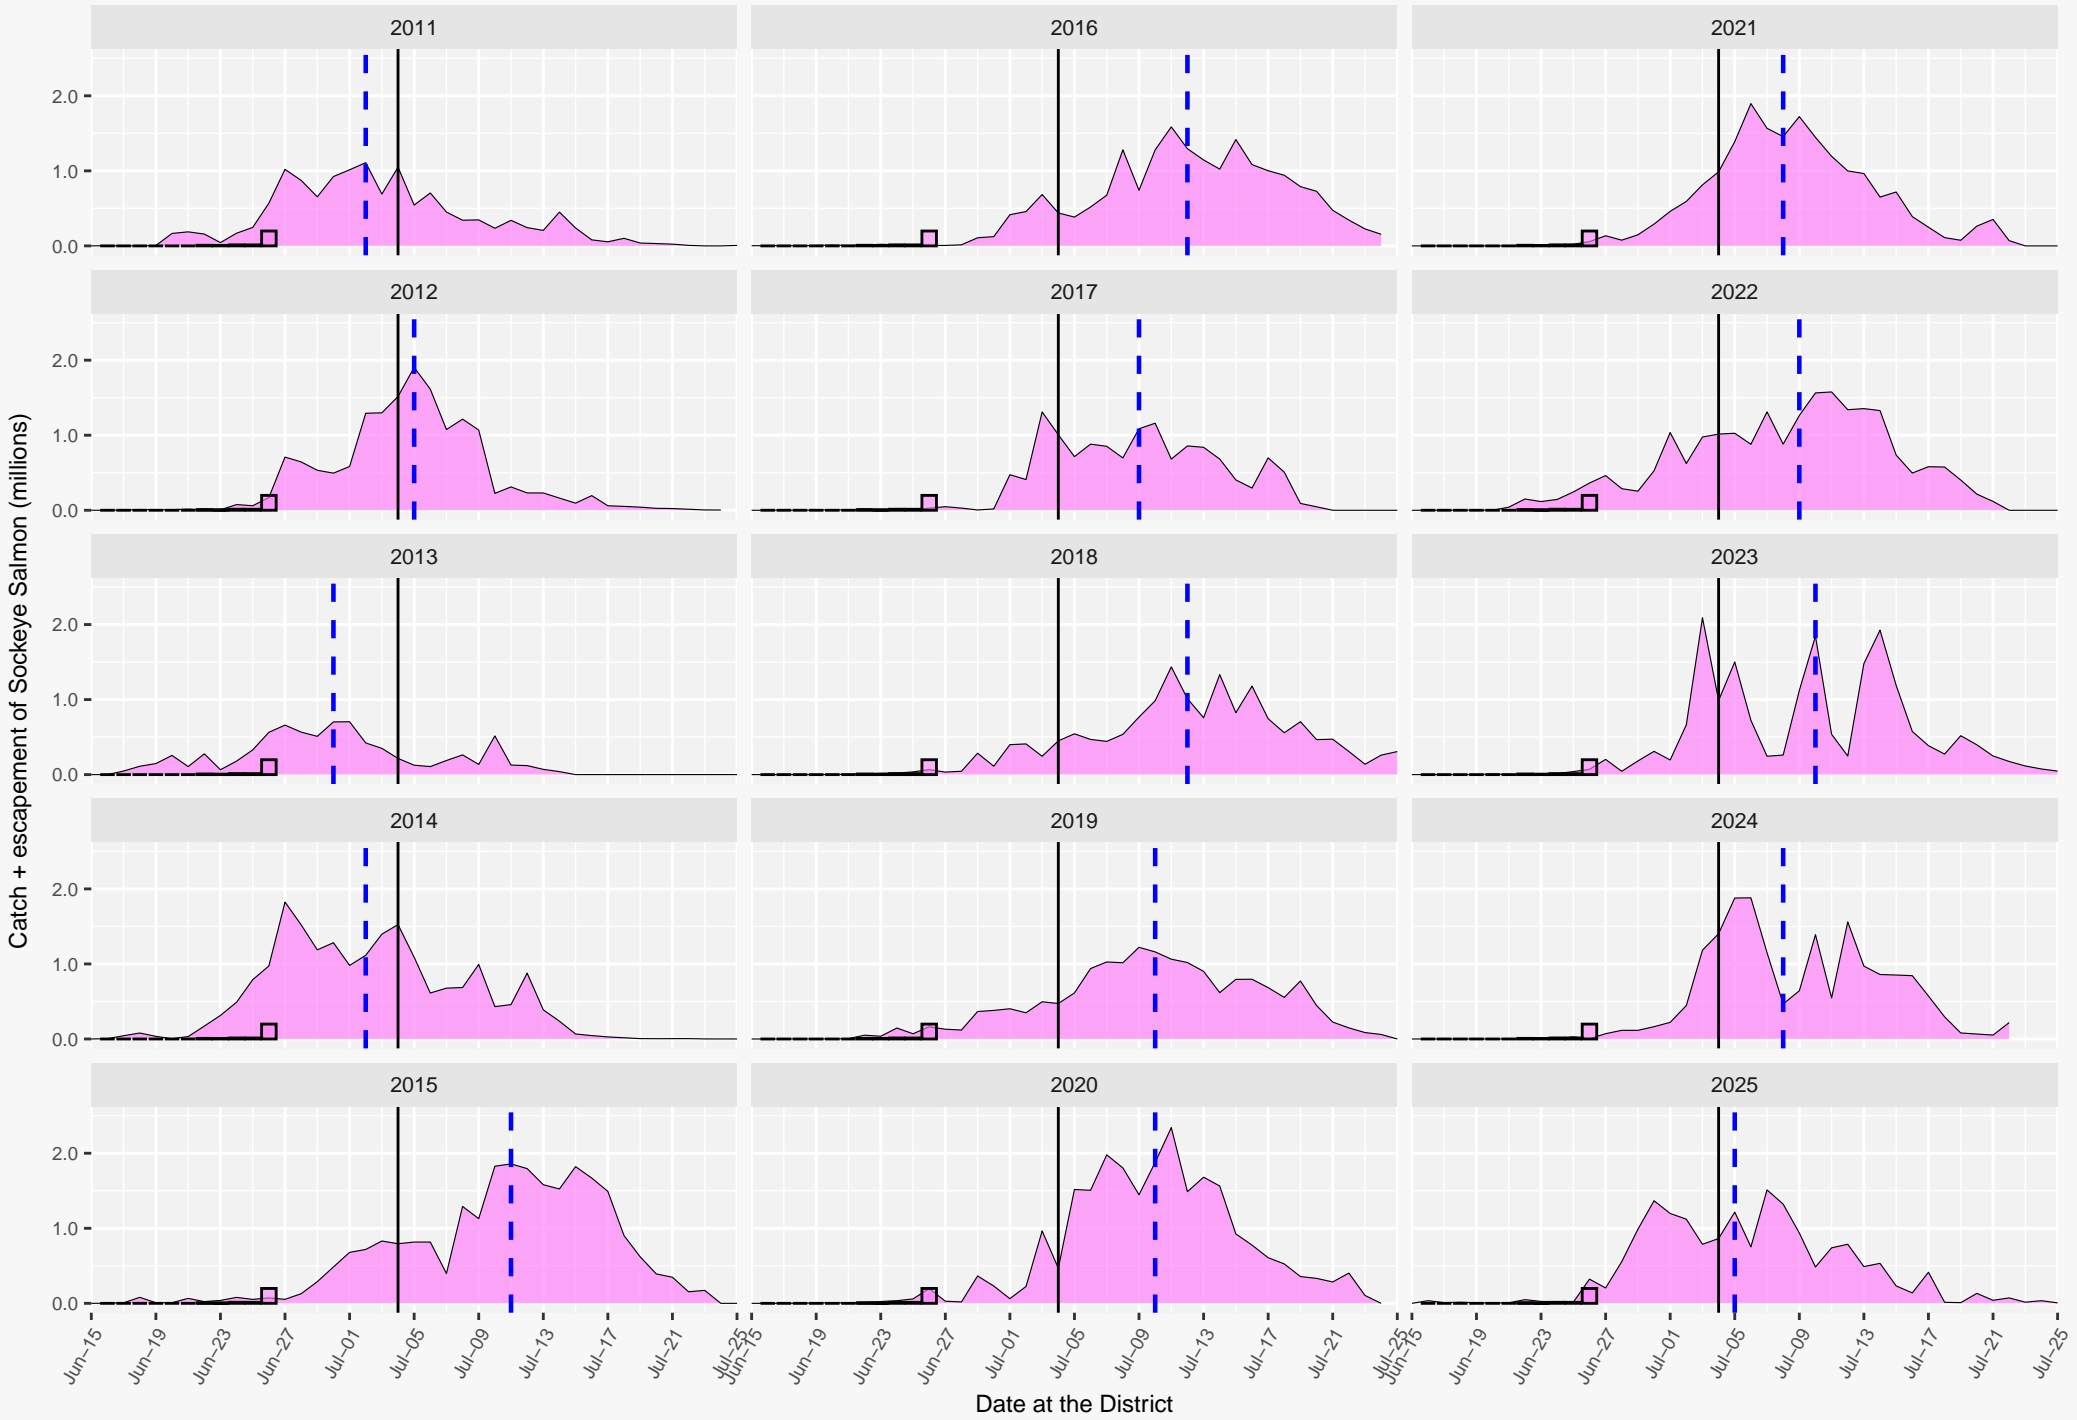

Ugashik District (columns represent C+E for 2026; blue dashed lines are when 50% of C+E occurred for that year)

Egegik District (columns represent C+E for 2026; blue dashed lines are when 50% of C+E occurred for that year)

Kvichak District (columns represent C+E for 2026; blue dashed lines are when 50% of C+E occurred for that year)

Nushagak District (columns represent C+E for 2026; blue dashed lines are when 50% of C+E occurred for that year)
